What's New in the AviScript?

AviScript is a intelligent and powerful tool that will convert video and DVD-Rips to AviSynth script files and also convert any audio formats. Audio of DVDs and XSVCDs is converted by BeSweet. After Conversion the Script Files are burned to DVD or exported to CCE for burning and use. AviScript will convert any videos into an appropriate format for AviSynth. AviSynth is a video-effects program for the AviScene-Editor which is the standard ecl (AviScript) editor for AviSynth. AviSynth can be downloaded for free from www.avinsynth.com or www.avi.com. Version 2.60 can be downloaded only for AviSynth 1.1 and 1.2 for it's engine features, all new files/files without engines will be avisynth 2.54 on the official site. AviScript supports the import of CCE Basic 2.69 and more CCE functions. DVD-Rips can be cut or split (as needed) in AviScript to variable length files for burning DVD or SVCD. AviScript will split a VCD with chapters automatically, while it will burn the DVD without chapters. AviScript can also convert DVD-Rips with all available Audio Codecs, (MP2, MP3, AC3) into mpeg- Audio (WAV) and convert Audio to WAV or AC3. The Audio of the DVD will be compressed by BeSweet. AviScript can also import DVD-Rips from Smartripper to AviScript. In AviScript, there is an option to set the Progessbar for all Files for all Paths, automatically. AviScript makes the AVSI-Driver for CCE more user friendly, while AviScript is written into AviSynth Engine. The finished Video/DVD will be saved on your harddrive. The converted script-files can be sent to your video-chip manufacturer for your editing. AviScript uses a small an empty database, that is updated/updated for Video/DVDs on the fly during the conversion. This is much faster than a full database with different files to convert. Converts videos/DVDs in multiple "directions" (By "direction" it is meant to understand the video/DVD is split in two, multiple files are
