Microsoft System Center Configuration Manager (SCCM) lets you manage software, data, and compliance on a single platform. With over 50,000 customizations, SCCM V6 Edition greatly expands your ability to optimize and protect information technology from threats, and allows you to create and update applications that meet the requirements of a particular customer and its network. SCCM V6 features are: Software and overall performance optimization Meeting the requirements of different customers and networks Software license management Filesystem and application management Centralized management of mobile applications and devices Domain Management Optional Tools Options provided to customers and networks Increased system resiliency and performance Mobile device and cloud management Improved system security (antivirus and malware protection) Reducing the number of obsolete software versions Destruction of obsolete and dangerous applications "File systems and applications" is a tool for installing the client part of the SCCM V6 environment, which provides centralized management of cloud technologies used in the organization. SCCM will be integrated with SCCM3 products (see "SCCM Environment Options") to further streamline software and hardware management and application administration. "Applications and Infrastructure" - extends the functionality of SCCV6 to manage various applications such as software, applications and infrastructure (ERP, CRM, CMM, ECM, IRP, DMS, SAP, BMS, HRM, MS Axapta, SAS, Dashboard, Apache, MySQL, SQL Server, .NET, Windows OS, PostgreSQL). The solution "Management of mobile and cloud applications" makes it possible to manage a mobile application, and, if necessary, ensure its synchronization and backup on local media. The NETBAG-INTERNET wireless solution is designed to provide security and data integrity in a virtual environment. The virtual environment is created on the basis of advanced software technologies. Due to this, it provides extremely effective integrity control. It also provides compatibility with existing and new applications. In case of damage, the virtual environment will automatically repair itself by
