Here's an application that has a sleeker interface than many similar programs on the market. Its user interface is a grid that makes it possible to sort data based on the detected size or the file type. The program quickly and easily identifies the folders that take up the most space on the hard disk. At the same time, you can check out the files that have the highest space usage. You can also see the details about individual files, including their total space and the size and format of their data. As a final touch, you can even sort files by size or by the date they were last modified. The application even has an option to deal with the unwanted files that you have never touched before. Such files are automatically deleted after 90 days. The same option also enables you to have all files created after a particular date removed as well. Features: Gathers information from Windows Explorer to help you analyze the structure of the drives and the size and location of the files stored on them. Sorts folders and files based on the data size or file type. Identifies the largest files and folders. Finds files based on the date they were last edited or created. Eliminates unwanted files, like temporary files, recycle bin contents, Internet Explorer cache and recent documents history. Simple setup. One-click installation and advanced configuration options allow you to personalize the program as you wish. Fast analysis. The program lists the largest files in a few seconds after the analysis is complete. This top-notch tool is an

It's a free software that helps you to manage your storage. But you need to keep in mind that this tool is not available for Windows users. GNOME Disk Utility is a freeware portable application designed to be used on PCs and Macs that run the GNU/Linux operating system. This is in fact the software collection that comes with the Ubuntu Linux operating system, and the official website says the same. This utility is not included by default on a Ubuntu system, but you can get it easily via the Ubuntu Software Center. So here is how you do that. First, open the Ubuntu Software Center and search for the software package name named `gnome-disk-utility`. This will open up the search results page and you can search for the software item by its description. It's a free program designed to help you with the management of all your disks and drives. Once you've found the package, you can install it by clicking on the Install button. Once you're done, you can launch the app by typing `gnome-disk-utility` in the Dash and you should get a shortcut on the Launcher. Here is how it looks. It's a lightweight app that can be launched and closed from the Dock. Launch This is an extremely powerful application that can help you manage all your drives, partitions and other storage devices. Now let us discuss the different features that you can expect from the app. First and foremost is the appearance of the app. The desktop version has a dark gray background with a light gray text. The main window contains the following sections. First, in the left side, you can see all your disks. This is a list of your disks, partitions, and volumes. You can use it to connect external drives, manage storage space, and backup your files. If you click on a disk, it will open a window showing you all the partitions that are available for you. If you click on the top left, you can see a list of mounted drives or volumes. You can change the drive or volume your systems point to by clicking on it. It also lists connected USB drives, external drives and NAS devices. After creating a

Repair file associations: As a result of improper file associations, you may have several folders that are not associated with the file extension of the files they contain. You can have problem accessing files that have such extensions. Remove extensions: In case you have Windows, we recommend you to use Windows Explorer to remove the extensions from the files. Also in case you have the FOLDER ASSOCIATION dialog you have to make changes there if you have used any Microsoft software to associate extensions and file locations. As an alternative, you can use below mentioned registry key to remove the extensions from the files. `HKEY_CLASSES_ROOT.FileExtension` Right-click, Browse and select the topmost and bigger folder that contains your file extension. Go to (Right-click) and select Delete. Click (OK). Open files or folders: See the Open dialog box and specify what kind of file types you want to open. Right-click, Browse and select the topmost and bigger folder that contains your file extension. Go to (Right-click) and select Open. Click (OK). Remove malware: Go to the adwcleaner.com home page and use the Advanced Threat Cleanup Tool. Remove registry files: If your computer is infected with a virus, the most effective method is to boot it in Safe Mode and use System Restore to remove the virus from your computer, this is a safer option. Also, you can use below mentioned registry key to remove the registry files. `HKEY_CURRENT_USER/Software/Microsoft/Windows/CurrentVersion/Run`
`HKEY_CURRENT_USER/Software/Microsoft/Windows/Current`
