Programming Language Integration AutoCAD supports programming through the integration of several programming languages. AutoCAD 2015 supports three languages – Visual LISP, Visual Basic, and AutoLISP. It also has the capability to integrate with the Microsoft.NET platform through the use of Visual Studio, Visual Studio integration, a standard way of developing for Visual LISP, and the use of.NET based programming languages. AutoCAD also supports languages including C++, Delphi, Borland C++Builder, Visual C++, and Visual Basic (2002). AutoCAD also supports Autodesk's in-house ObjectARX language, which is included with the C++Builder plugin. AutoCAD also supports a programming API called Application Programming Interface (API) using either the Visual Basic programming language or AutoLISP. Field of the Invention The present invention relates to a semiconductor device and, more particularly, to a semiconductor device having a built-in storage capacitor. 2. Description of the Prior Art One of the important elements in a semiconductor memory device is a storage capacitor. In order to increase the integration density of a memory device, the capacitor must be made smaller, and this decrease in size is the single biggest factor in reducing the memory device size. It is therefore highly desirable to decrease the size of the storage capacitor. In the prior art, it is typical to

form a capacitor as a large region defined by N.sup.+ buried layer diffusion regions formed in a silicon substrate and silicon oxide layers formed on the substrate. However, the recent tendency is to form storage capacitors having a very small size. Such a small size storage capacitor is typically formed in the same steps as a bit line or a control gate electrode. In a semiconductor device in which a bit line and a control gate electrode are formed in the same step, the bit line and the control gate electrode are formed prior to the formation of the storage capacitor. a1d647c40b
