Field of the Invention The present invention relates to a communication apparatus and a control method thereof, which can reduce the effect of battery discharge caused by transmitting/receiving communication data. 2. Description of the Related Art In recent years, various electronic devices including mobile phones, smartphones and the like have been marketed in the market. These electronic devices are required to perform smooth communication. For example, in a mobile phone, in order to perform communication, there is provided a transmission/reception circuit including a power amplifier in which the supply of a power source voltage is controlled (see Japanese Unexamined Patent Application Publication No. 2010-113813). The supply of the power source voltage to the power amplifier is stopped, for example, when a ratio between output signals transmitted from a speaker and power amplifier becomes equal to or greater than a predetermined value. In this case, the battery can be prevented from being discharged because the effect of the power supply of the power amplifier is reduced when the sound from the speaker is not outputted to the outside as described above. In addition, in a wireless LAN (Local Area Network) card and the like, there is a case in which a microcomputer stops a supply of a power source voltage to a transmission/reception circuit including a power amplifier when a ratio between output signals transmitted from the transmission/reception circuit is equal to or greater than a predetermined value (see Japanese Unexamined Patent Application Publication No. 2011-208911).Don't ask the Pope what he would do about Islam because he won't answer. Of course, he could. He probably wouldn't if he didn't know what the answer was. But any answer he gave would only help amplify the talking points of the enemedia so it becomes harder for some people who are giving Islam a bad rap to be heard.
