"I have used Lightroom since version 1.0, so I have an idea of how the workflow should be," says Cai. "I am still a newbie when it comes to PS. I always try to learn the software by my own. It is really difficult because I am never sure if I understand every feature correctly." "In my opinion, the main technical limitation of Adobe Photoshop is the usability of the products," he continues. "Lightroom is a right way to do it. Lightroom is more user friendly. If not, we can use Photoshop to correct the images. But I feel Photoshop is only suitable for professionals. For example, Lightroom has a great feature to correct perspective in photos." Brad Galloway, a senior editor at Wired Magazine, has a dual-personality with respect to Lightroom and Photoshop. "The 'Film' tool is perfect for making initial adjustments to images that will be compiled into a project," he says. "For everyday tweaking, however, I use Photoshop. When you're done, you export the adjusted image to Lightroom. The updated version of the image is sometimes available for viewing within Lightroom itself." "Lightroom is the ultimate, all-in-one solution for those who shoot and own most of their own images," says Frantisek Csizmazia, Director of Business Development at Lightroom Technology. "It's one of the main reasons why we've become the fastest-growing photography software in history. It offers more camera-specific control and integration than any other imaging program on the market, allowing even photographers who shoot with smartphones and other non-traditional camera systems to create images of the highest quality."
